

BIDBERT

WHITE PAPER

Small rat. Big thesis.

An original Solana meme character.

THE THESIS IS CHEESE.

Version 1.0 / 13 September 2026

bidbert-research.netlify.app

01 / The thesis is cheese

BIDBERT is an original meme-coin character on Solana: a tiny rat with enormous market opinions and a research thesis made entirely of cheese.

The project combines a transferable token with a recognizable character, short videos, reaction stickers and community-made humor. The Research Department is a fictional setting for the character: an overconfident analyst who can turn any subject into an elaborate argument about cheese.^{[3][7]}

Purpose

The creative aim is to make BIDBERT recognizable through a consistent voice, useful reaction art and stories people want to share. The community can help shape the character through captions, sketches, animation ideas and feedback. Participation in these activities does not require buying the token.

BIDBERT is a speculative meme token. Its current purpose is cultural participation and trading around the character. This white paper does not introduce staking, a lending protocol, a yield product or a claim on project revenue.

What exists in version 1.0

Component	Status at publication
Solana token	Launched through Pump.fun and active on its bonding curve. ^{[1][3]}
Project website and X account	Public website, character art and published videos. ^{[7][8]}
Telegram community	Official invite is provided on the project website. Community access is managed through Telegram. ^[7]
Reaction stickers	Twelve completed sticker designs. Publication as an installable Telegram set is a separate step; no live pack URL is asserted here.

This document describes the project and its current token configuration. Future work is identified as planned, rather than presented as a delivered product. Market price, market capitalization and trading volume are intentionally excluded because they change continuously.

02 / Token facts and distribution

Field	Verified value
Name / symbol	BIDBERT / BIDBERT (displayed as \$BIDBERT)
Network / launch venue	Solana mainnet / Pump.fun
Token program	Solana Token Extensions program (Token-2022)
Supply at verification	1,000,000,000 BIDBERT
Decimals	6
Mint authority / freeze authority	None / None
Metadata update authority	None in the decoded on-chain metadata
Decoded mint extensions	Metadata pointer and token metadata

Mint address: B1MRPYcmN5Fcxr1HDpAy2bnZB8pUScTJwCmVexYvpump

The mint state was checked at finalized slot 446827505, on 13 September 2026 at 18:24 Central.^[1]

Supply and permissions

The standard minting and freezing roles are removed in the verified configuration. Holders may burn tokens, so total supply can decrease. No recurring burn program is promised. The decoded mint contains no transfer-fee configuration or transfer-hook extension; platform trading and network fees still apply.^{[1][5][6]}

Distribution disclosure

The wallet identified as creator by Pump held **4,452,050.594339 BIDBERT**, approximately **0.4452%** of total supply, at 18:25 Central on 13 September 2026. This is a wallet-balance snapshot, not an initial team allocation or a statement of all holdings under common control.^{[2][3]}

No independently verified beneficial-ownership map, vesting schedule, treasury allocation or liquidity-lock certificate is included in this edition. Balances can change, and one person may control several wallets. Revoked mint and freeze authorities do not establish fair distribution or protect against selling pressure.

03 / Trading, liquidity and fees

BIDBERT launched through Pump.fun. At the verification snapshot, Pump reported that its bonding curve had not completed. Graduation and a subsequent PumpSwap market are potential platform transitions, not promised project milestones.^[3]

Market stage	How to interpret it
Bonding curve - current	Purchases and sales interact with the launch platform's pricing mechanism. Available reserves, fees and the order size affect execution.
Graduation - conditional	The platform may migrate a qualifying coin to its canonical PumpSwap pool. BIDBERT is not described as graduated in this edition.
Secondary trading	Availability in a wallet, screener or trading interface depends on that service. Visibility does not mean endorsement or guaranteed liquidity.

Published platform fee schedule

Pump's published bonding-curve schedule lists the following components. These are platform fees, separate from Solana network charges, optional priority fees and any additional interface charges.^[4]

Fee component	Published rate
Creator fee	0.300%
Protocol fee	0.950%
Liquidity-provider fee on the curve	0%
Total platform trading fee	1.250%

The schedule was checked on 13 September 2026. Rates and fee treatment may change; use the current platform quote before signing. PumpSwap applies a separate schedule after graduation.^[4]

Creator fees and token-holder rights

Creator fees are distinct from token ownership. Holding BIDBERT does not, by itself, entitle someone to creator-fee distributions. This white paper does not certify recipient identities or publish a verified fee-sharing configuration. No named influencer partnership or endorsement is asserted.

04 / Community and development

BIDBERT's development priorities center on the character, useful community assets and consistent communication. Success for the creative project means people returning, contributing and recognizing the rat.

Stage	Priorities	Status
Foundation	Token launch, original mascot, public website and initial video content.	Delivered
Participation	Publish the 12-sticker set; improve welcome materials; gather ideas for the next character release.	Next priorities
Distribution	Host character sessions, test original creator collaborations and keep official token-profile links consistent.	Planned tests
Expansion	Develop further animation and community formats when participation, production capacity and resources justify them.	Conditional

These priorities are a direction for development, not a delivery contract. Dates, spending, listing outcomes, market-cap targets and token-price targets are not guaranteed. Material changes should be communicated through the official project channels.

Ways to participate

Share a character idea. Write a cheese-themed caption. Make an original meme. Give specific feedback on a sticker or video. Help newcomers locate the correct mint and official channels. Respect community rules and the rights of other creators when contributing work.

Decision-making

The project operator manages official publishing, assets and community administration. Feedback and informal polls may guide creative choices. This edition does not establish a DAO, binding on-chain governance or token-weighted control of project decisions.

Collaborations and resources

Future collaborations should describe the actual work and disclose compensation or other material relationships. Marketing expenditure is not a promise of demand. No fixed treasury budget, buyback program, staking reward, airdrop allocation or holder revenue share is created by this document.

05 / Transparency and material risks

The character is fictional. The token and the decisions people make about it involve real financial risk. Anyone considering BIDBERT should assess the market independently.

Risk	What it means
Value and liquidity	The token can lose all value. A quoted price or market capitalization may bear little relation to the amount a holder can actually withdraw.
Concentration and selling	The full ownership distribution has not been independently mapped. Project-associated or other large wallets may sell or transfer tokens.
Technology and platforms	Solana, token programs, wallets, launch platforms and trading interfaces can suffer outages, defects or other failures. A limited configuration check is not a full security audit.
Impersonation and custody	Names and artwork can be copied. Verify the full mint and destination before interacting. Never share a seed phrase or private key.
Execution and continuation	Creative releases, community activity and platform access depend on people and resources. Planned features may change or never be delivered.

Scope of the disclosures

This edition includes on-chain configuration checks and a single creator-wallet balance, not an independent audit of the token, every related wallet, the launch process or the project operator. It does not certify a locked liquidity position, a risk-free token or an influencer relationship.

Rights and expectations

This white paper grants no equity, dividend, fixed redemption value, intellectual-property ownership or claim on creator fees. It is a project description, not personalized investment advice. Its wording does not determine how any authority may legally classify the token.

Public communications should identify paid promotion clearly, keep confirmed facts separate from plans, and link to the correct mint. Community growth should come from voluntary participation and authentic interest.
